

RQI-P GO Simulation Station – Features and Benefits

The RQI-P Go Simulation Station has been created to enable healthcare systems to provide the RQI® & HeartCode® Complete programs to learners who may not have access to a primary location with traditional Simulation Stations.

This modular Station provides the essential elements required to participate in RQI or HeartCode Complete successfully.

The RQI-P GO Simulation Station has been designed for freestanding locations within a healthcare system that would be considered ancillary to the main facility, such as:

- Large clinics
- Stand-alone emergency rooms
- Surgical centers
- Outlying clinics
- Urgent Care facilities

Benefits

Educational Opportunities: Keeps CPR skills sharp with low-dose, high-frequency quarterly sessions, while allowing healthcare providers and non-clinical staff to stay on-site without having to travel to a training facility.

Mastery Learning Design: Enhanced audio and visual coaching with real-time feedback to support continuous improvement.

Reporting: RQI Analytics measure compliance and competence at individual and group levels.

Measurement Capability: Learning technology that measures Quality CPR metrics.

Learning Management System: capable of integration with Target Solutions and other 3rd party content providers.

Support: Gain on-going personalized and site-specific support from our Customer Success Team.
